UniAdvisor App

The university selection process in Turkey is indeed a troublesome and complex procedure that often presents a considerable challenge to students. The aim of this project is to simplify and streamline the university selection process for students in Turkey. It provides a dedicated platform, the Uni Advisor, that includes a Tercih Robotu feature. This feature enables students to input their scores and preferences, resulting in the generation of a list of universities and departments they qualify for. The application not only offers comprehensive information on universities, including their addresses and websites but also includes features like identifying student dormitories near selected universities and creating transportation routes for easy commuting. Additionally, the project aims to provide detailed insights for students considering private institutions, allowing them to compare various private universities. In

summary, the primary aim is to make the complex university selection process more accessible and informed for a wide range of students.
